VGX-XL1A Computer

Correction

The section of the sheet titled "VGX-XL1A - Rear Inputs & Outputs" incorrectly states that 1080i component output is supported. This format is not supported through the component output. Certain applications provided with your VGX-XL1 Digital Living System™ (for example, DVgate Plus™) only work with 1080i resolution so they may not function properly when your system is connected with the component output.

The section of the sheet titled "VGX-XL1A Digital Living System Computer" incorrectly states that a coaxial cable is supplied. The coaxial cable is not supplied with your VGX-XL1A Digital Living System Computer.
